The Apollo Guidance Computer - Frank O'Brien - 2010-06-25

The technological marvel that facilitated the Apollo missions to the Moon was the on-board computer. In the 1960s most computers filled an entire room, but the spacecraft's computer was required to be compact and low power. Although people today find it difficult to accept that it was possible to control a spacecraft using such a 'primitive' computer, it nevertheless had capabilities that are advanced even by

today's standards. This is the first book to fully describe the Apollo guidance computer's architecture, instruction format and programs used by the astronauts. As a comprehensive account, it will span the disciplines of computer science, electrical and aerospace engineering. However, it will also be accessible to the 'space enthusiast'. In short, the intention is for this to be the definitive account of the Apollo guidance computer. Frank O'Brien's interest in the Apollo program began as a serious amateur historian. About 12 years ago, he began performing research and writing essays for the Apollo Lunar Surface Journal, and the Apollo Flight Journal. Much of this work centered on his primary interests, the Apollo Guidance Computer (AGC) and the Lunar Module. These Journals are generally considered the canonical online reference on the flights to the Moon. He was then asked to assist the curatorial staff in the creation of the Cradle of Aviation Museum, on Long Island, New York, where he helped prepare the Lunar Module simulator, a LM

procedure trainer and an Apollo space suit for display. He regularly lectures on the Apollo computer and related topics to diverse groups, from NASA's computer engineering conferences, the IEEE/ACM, computer festivals and university student groups.

Transforming a University - Angela Brew - 2007

This unique collection shows what happens when one university takes on the challenge of developing the scholarship of teaching and learning with a view to enhancing students' learning experiences. Authors from the sciences, engineering, humanities and social

sciences, and from the health sciences, demonstrate the research they have done to investigate their students' learning. The editors, Angela Brew and Judyth Sachs, have captured the intricacies of teaching and learning in different academic domains in this rich and varied collection. The book explores students' responses to contemporary art, to multicultural music and to architecture for the poor and dispossessed. It explores students' ability to transfer mathematical knowledge from one subject to another; how students learn to talk like a pharmacist, or understand basic concepts in physics; how students are prepared for university study in first year classes or in the operating theatre; how they learn to write like a scientist; how they learn in online discussions and how they understand group work and group assessment. Each chapter is grounded in rigorous research and scholarship and indicates actions that have been taken to improve teaching and students' learning. This book is a remarkable demonstration of scholarly teaching practice from a

single institution. It should be read by all teachers and managers in higher and tertiary education institutions interested in developing teaching and learning.

**The Battle for Norway:
April-June 1940** - Geirr

Haarr - 2010-05-10

The acclaimed historian and author of *The Gathering Storm* continues his in-depth study of Northern European naval warfare during WWII. The Nazi invasion of Norway in 1940 was the first modern campaign in which sea, air and ground forces interacted decisively. In this detailed history, Geirr H. Haarr presents a comprehensive study of the naval aspects of the operation. He begins with the events off the coast of southern and western Norway where Norwegian and British forces attempted to halt the German advance out of the

invasion ports as well as the stream of supplies and reinforcements across the Skagerrak Strait. Haarr then focuses on the British landings in Central Norway, where the Royal Navy first had its mastery challenged by air superiority from land-based aircraft. Next, he examines the events in and around Narvik where Allied naval, air and land forces were engaged in the first combined amphibious landings of World War II. Finally, Haarr sums up the the evacuation in June, in which the first carrier task force operations of the war, including the loss of the HMS *Glorious*, figure prominently. As Haarr's previous volume, *The Gathering Storm*, the narration shifts between strategic and operational issues, and the experiences of the officers and soldiers on the frontlines. Extensive research and use of primary sources reveal the many sides of this battle, some of which remain controversial to this day.
